

DC Snorkel Monitor Installation Part # 925xxx

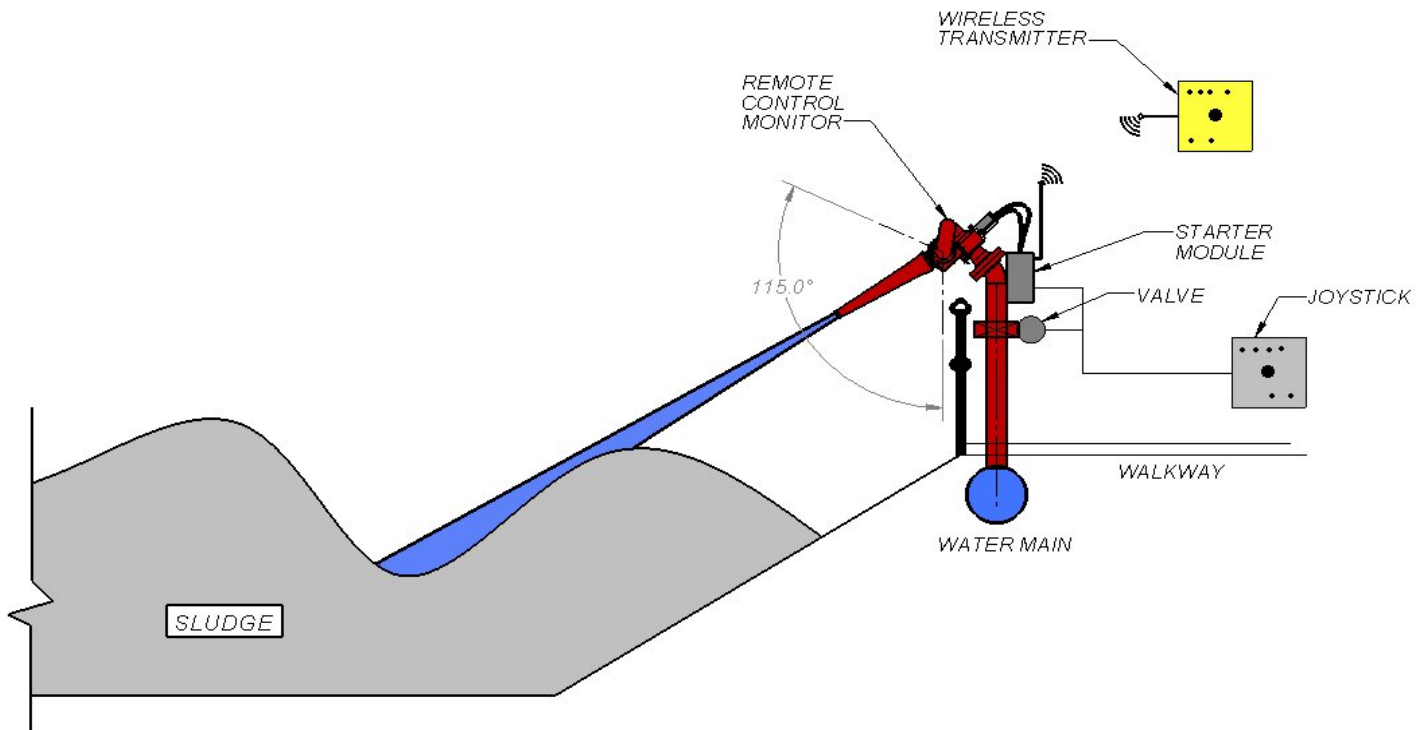

The Stang DC Snorkel Monitor installation is the best & most affordable method to automate tank cleaning operations. Using standard & proven Stang equipment the end user is able to operate the system from one central point. With the addition of wireless technology the operator can control from anywhere in the area. These systems are able to drive monitor movements, nozzle spray patterns, water valve operation or any other commands the customer may require.

Stang's worldwide proven experience in monitors & control systems allows us to control a single monitor to multiple units at any given time. Monitor control can be daisy chained together via PLC or basic relay controls.

Typical Systems May Include

- Single to Multi Monitors
- Shaper Tip Nozzle or Fog Nozzles
- Simple to Multi Monitor Control Systems
- Flow Up to 1000GPM (225 M³/H)
- Fixed Joystick Panel or Wireless Control
- Water Valves
- Standpipes
